

Aqua-Chi vs. IonCleanse® Germination Test

The purpose of this germination test was to determine how a living seed will respond when exposed to water charged with the Aqua-Chi and water charged with the IonCleanse. We started by germinating seeds in regular water to verify the viability of the seed being used. For this test we used wheat seeds.

Seeds in water

**Control
Seeds
Tested**

Seeds are good

This photo shows the control seed placed in water to verify that we indeed do have a high germination percentage. (i.e., make sure they grow)

This photo is the control seeds germinated. We have verified that the seed is good.

Aqua-Chi vs. IonCleanse® Germination Test

The purpose of this germination test was to determine how a living seed will respond when exposed to water charged with the Aqua-Chi and water charged with the IonCleanse.

**Day
1**

Water is charged with The Aqua-Chi and put into dish. Seed is added.

Water is charged with the IonCleanse and put into dish. Seed is added.

**Day
6**

Germination is evident in dish charged by The Aqua-Chi.

Germination is evident in dish charged by the IonCleanse.

Aqua-Chi™

IonCleanse®

**Day
14**

Germination is coming along great. The orange coloring you can see is spores that have settled in the water and began to grow.

With the IonCleanse seeds we saw the start of germination and then nothing. They just stopped growing. We suspected they were dead.

Aqua-Chi vs. IonCleanse® Germination Test - transfer seeds to soil

The purpose of this germination test was to determine how a living seed will respond when exposed to water charged with the Aqua-Chi and water charged with the IonCleanse. We took the seeds from the water-charged test (step 2) and planted them in healthy soil to see if they would grow.

Aqua-Chi™

**Day
1**

IonCleanse®

Seeds charged with The Aqua-Chi continued to sprout and grow.

Seeds charged with the IonCleanse did not sprout at all. The one bit of growth you see was that way when we transplanted it. It died quickly.

Aqua-Chi™

**Day
6**

IonCleanse®

Aqua-Chi seeds showing strong and healthy growth.

IonCleanse seeds that showed initial growth are completely dead.

Aqua-Chi™
growing strong!

IonCleanse®
dead.

**Day
14**
